Recurring usage

Problem — Manual DocumentOps = Cost + Compliance Risk

INBOX → SPREADSHEETS → THREADS → CORE SYSTEMS.

Baseline workflow today

1. **INBOX / PORTAL / WHATSAPP**
   PDFs, scans, emails, attachments.
2. **KEYING + SPREADSHEETS**
   Manual extraction, checks, rework.
3. **APPROVALS IN THREADS**
   Email/WhatsApp approvals, missing trail.
4. **CORE SYSTEMS**
   LOS / ERP / TMS updated by hand.

Result: exceptions are not tracked end-to-end; audit evidence lives in folders + message threads.

Operational impact

- SLA delays (manual keying + rework).
- Audit gaps (approvals in threads).
- Cost scales linearly with volume.

Read-only OCR isn't enough — teams need controlled write-back with an audit trail.

Why Now — Residency, Vendor Risk & Reliable VLMs

RESIDENCY MANDATES · VENDOR RISK · RELIABLE VLMS.

3 triggers

- **Residency + cross-border:** default expectation is in-region processing (India/UAE).
- **Vendor risk + audit rights:** buyers require auditable runs, controls, and clean exit paths.
- **Doc AI reliability:** extraction quality is now “good enough” to run end-to-end workflows.

Buying criteria shifted

- In-region deployments (India/UAE VPC) + strict data boundaries.
- Immutable audit logs + replayable runs.
- Tasks/approvals + controlled write-back into LOS/ERP/TMS.

Closed-loop + residency is now table stakes for BFSI & logistics.

Market Opportunity — India, GCC, Global

INDIA + GCC ~$1.5B SPEND ('25E) · GLOBAL $15–17B TAM

Market size snapshot

$0.9B India DocOps automation spend ('25e)

$0.6B GCC document automation ('25e)

$15–17B Global document automation TAM ('25e)

Wedge → expand

NBFC underwriting | Logistics billing | Compliance + audit

Expand via more workflows + throughput/customer.

Agentic Workflows (Closed-loop) with Built-in IDP

WORKFLOWS RUNTIME (FLOWS.FRACTO.TECH) + BUILT-IN IDP ENGINE (OCR.FRACTO.TECH).

Intake → parse → validate → task/approve → controlled write-back (with audit + residency).

PRODUCT

Agentic workflows

- Built-in IDP
- Policy validators
- Tasks + approvals
- Controlled write-back

HOW IT WORKS

4-step loop

1. **INTAKE** Email / web-hook / API → one workflow run.
2. **PARSE + NORMALIZE** PDFs → clean text + fields.
3. **EXTRACT + VALIDATE** Checks + ex-ception routing.
4. **EXECUTE** Approvals → controlled write-back.

OUTCOMES

Ops impact in weeks

- Doc → system updates
- Exceptions only + audit
- India/UAE VPC-ready

₹4 Cr Momentum Bridge — Plan & Ask

₹4 CR BRIDGE TO SCALE FROM ₹1.03 CR → ~₹5 CR ARR + SOC-2 + INDIA/GCC VPC KITS.

Standard seed convertible · targeting 3–5 partners.

Target close: Q1 2026.

ARR today · ₹1.03 Cr **12-month milestone · ₹5 Cr ARR**

Use of funds (₹4 Cr)

CATEGORY	KEY DELIVERABLE
GTM	Pods + partnerships
Product	Validators + add-ons
Compliance	SOC-2 + audits
Infra	India/UAE VPCs

12-month plan & outcomes

Revenue engine ARR & GTM PODS

₹1.03 Cr → ~₹5 Cr ARR with expansion-led growth.

Product STP + EXPANSIONS

Increase STP and expansion per customer; reduce deployment time for new workflows.

Compliance + residency SOC-2 & VPC KITS

SOC-2 Type II + repeatable India/GCC VPC kits.

The Raise & How We Partner

WE'RE LOOKING FOR 3–5 PARTNERS TO COMPLETE THIS ₹4 CR BRIDGE.

How we propose to engage

- **30-minute working session (this week)** to align on fit.
- **Tailored deep dive** on priority workflows.
- **Diligence & closing path** with a clear cadence.
- **Data room** available after the first call.
