AI INFRASTRUCTURE FOR EDUCATION LENDING

Automate document review for education-loan operations.

Fracto classifies pages, routes them to the right parser, and returns structured outputs for underwriting teams.

- Page-level classification
- 40+ document flows configured
- Parser routing with validations
- APIs for LOS and review queues

Kuhoo Finance | Gyandhan | Varthana | Study abroad files | Domestic education lending

What this changes

41 flows
Configured in the current education-loan stack

1 intake layer
Classification, parsing, validation, and routing

Page aware
Handles mixed packets page by page

Ops ready
JSON, confidence flags, and review hooks

Positioning

Replace manual packet sorting and fragmented OCR with one document layer for education-loan ops.

THE OPERATIONAL PROBLEM

Education-loan files are mixed packets, not clean single-doc uploads.

One case can combine KYC, academics, admissions, income, bank statements, and property papers.

INTAKE

Packets arrive as mixed bundles

Scans and PDFs often contain many document types together.

PARSING

Each page needs different logic

Marksheets, passports, I-20s, and salary slips need different parsers.

RISK

Validation comes too late

Mismatches are often found after manual cleanup.

SCALE

Review bandwidth gets wasted

Teams spend time sorting pages instead of underwriting.

Typical failure pattern

- Mixed packets land in intake
- Generic OCR runs too early
- Reviewers split pages manually
- Sanction timelines slow down

What lenders need instead

- Page-level classification
- Specialist parser routing
- Validations before review
- Exceptions only for low-confidence pages

CURRENT COVERAGE

Specialized parsers already cover the core education-loan packet.

01

Identity and KYC

Aadhaar variants, PAN, passport front and back, and office ID.

02

Academic records

10th and 12th marksheets, UG degree, provisional, diploma, and masters records.

03

Admissions and test scores

Admission letter, I-20, IELTS, TOEFL, GRE, PTE, and Duolingo.

04

Income and employment

Salary slips, Form 16 and ITR, relieving letter, pension, and agri income docs.

05

Banking, address, and collateral

Bank statements, address proofs, title deed, GST, and UDYAM coverage.

06

Fallback and exceptions

Classification parser plus fallback coverage for unknown or low-confidence pages.

Inventory snapshot

- 41 configured parser flows
- Classification parser: GD-PgP
- General parser fallback
- Domestic and abroad files
- KYC + academics + income
- Collateral coverage

WORKFLOW FIT

Fracto can sit inside the full intake and underwriting flow.

01

Capture

Students or ops teams upload mixed packets.

02

Classify

Each page is identified before extraction begins.

03

Route and Parse

Pages go to the right parser for that document type.

04

Validate and Decide

Validations and exception routing feed cleaner records downstream.

High-value insertion points

- Application intake
- Underwriting desk prep
- Co-borrower verification
- Study abroad workflows
- Reviewer queues

Validation model

- Confidence scoring
- Coverage checks
- Cross-page consistency
- Fallback review for edge cases

REFERENCE SET

Built for lenders handling student, co-borrower, and admissions-heavy files.

Relevant for study-abroad, domestic, and collateral-backed workflows.

Why this segment converts well

- Many document families per case
- Study-abroad adds admissions complexity
- Co-borrower and collateral checks add rework
- Faster file readiness improves SLAs

Messaging that resonates

- Stop sorting pages by hand
- Route every page automatically
- Catch mismatches earlier
- Unify intake and validations

BUSINESS OUTCOMES

The value case for education-loan underwriting and ops teams.

The gain is cleaner files, earlier validations, and less manual review.

Earlier readiness

Files reach underwriting already classified and structured.

Cleaner decisions

Validations surface mismatches before manual review begins.

One workflow

Classification, routing, parsing, and exceptions in one layer.

Common workflow bottlenecks

- Mixed packets slow file readiness
- Study-abroad files are harder to standardize
- Different document types need different parsers
- Late validations increase review effort

What Fracto enables

- Faster packet classification and routing
- Cleaner outputs into LOS and review queues
- Manual review only for low-confidence pages
- Coverage expansion as new document types appear

RECOMMENDED NEXT STEP

Start with an education-loan pilot.

Suggested pilot scope

- Input bundle: KYC, academics, admissions, income docs, and bank statements
- Flow: classify, route, validate, and return structured outputs
- Integration: LOS or reviewer queue
- Success: coverage, accuracy, effort saved, and exception rate

Outcome

A before-and-after view of file readiness, review effort, and parser coverage.

What Fracto brings

- Configured parser inventory
- Page-level classification and routing
- Fallback handling for edge cases
- Low-lift integration

Ideal buyer personas

Head of Underwriting Ops

Credit Operations

Risk and Policy

Product for LOS

Engineering for Document Flows

Prepared for education lenders evaluating intake and underwriting automation.

NEXT STEP

Ready to see the education-loan workflow in action?

Book a demo to review classification, parser routing, validations, and reviewer workflows on real education-loan files.

Best fit for

- Study abroad lenders
- NBFC underwriting
- Domestic education finance
- Co-borrower workflows
- Collateral-backed cases

Demo Focus

Show capabilities first. Then scope the right pilot.
