AI INFRASTRUCTURE FOR KYC AND FLEET OPS

Automate onboarding, document checks, and verification for mobility operators.

Fracto turns driver and vehicle documents into fast, structured decisions for onboarding and compliance teams.

- Aadhaar parsing with masking
- PAN, DL, and RC extraction
- Parivahan validation checks
- APIs for apps, ops desks, and reviewer queues

Built for operators like Routematic | GoaMiles | Alt Mobility | WhistleDrive

Fleet marketplaces and EV operators

What this changes

< 60 sec
Typical extraction turnaround

1 API layer
OCR, parsing, masking, and validation

Ops ready
JSON, audit trails, and confidence flags

Scale safe
Handles noisy field uploads and retries

Positioning

Replace manual review and stitched-together tools with one verification layer for mobility workflows.

THE OPERATIONAL PROBLEM

Driver and vehicle onboarding is still document-heavy, slow, and error-prone.

Mobility operators move fast, but onboarding still gets stuck in manual review and poor-quality uploads.

DRIVER KYC

Identity capture fails in the field

Blurred Aadhaar and PAN uploads slow approvals.

VEHICLE OPS

DL and RC data is retyped manually

Retyping creates errors and delays.

RISK

Fraud checks arrive too late

Weak validation pushes bad records downstream.

SCALE

Volume spikes crush reviewer bandwidth

Launches and hiring pushes create instant backlogs.

Typical failure pattern

- Mixed-quality Aadhaar, PAN, DL, and RC uploads
- Raw OCR without normalization or validation
- Manual reviewer cleanup across multiple tabs
- Slow approvals and lower conversion

What mobility teams need instead

- One layer for extraction, masking, and validation
- Manual review only on low-confidence cases
- Fast integration into apps and admin tools
- Clear auditability for compliance teams

CORE MODULES

Use cases mapped to mobility onboarding and compliance.

01

Aadhaar parser with masking

Extract key fields and mask sensitive data.

02

PAN card parser

Normalize PAN fields for onboarding flows.

03

DL and RC parser

Pull registration and license fields from noisy uploads.

04

Parivahan API integrations

Validate extracted records against source systems.

05

Exception routing

Route only low-confidence cases to reviewers.

06

Ops-ready payloads

Return JSON, confidence, and review status to ops tools.

Example workflow bundle

Upload | Classify | Extract | Mask | Validate | Score | Review | Approve

END-TO-END OPERATIONS FLOW

Fracto can sit inside the full mobility onboarding stack.

01

Capture

Drivers or ops teams upload Aadhaar, PAN, DL, and RC.

02

Parse

Fracto classifies, extracts, masks, and structures the record.

03

Validate

Parivahan and rules checks validate the record.

04

Decide

Ops systems receive approve, review, or reject decisions.

High-value insertion points

- Driver onboarding
- Vehicle onboarding
- Compliance refresh workflows
- Partner onboarding
- Central review queues

Integration model

- REST APIs into product flows
- Webhook callbacks for async states
- Dashboard access for ops teams
- Custom mapping into internal tools

MOBILITY REFERENCE SET

Built for operators with driver, vehicle, and compliance complexity.

Relevant for employee transport, taxi networks, EV fleets, and managed operators.

Why this segment converts well

- High document volume
- Strong need for masking and traceability
- Frequent vehicle and driver validation
- Clear ROI from faster activation

Messaging that resonates

- Activate drivers and vehicles faster
- Reduce fraud and rework
- Unify document flows under one API
- Mask sensitive identity data

BUSINESS OUTCOMES

The value case for mobility operations teams.

Illustrative impact for a typical onboarding workflow.

70 to 90%

Less manual data entry.

2 to 5x

Faster onboarding turnaround.

1 stack

One layer for parsing and validation.

Use this deck when the buyer says:

- "We still review documents manually."
- "Our onboarding SLA slips at volume."
- "We need masked Aadhaar workflows."
- "DL and RC checks are fragmented."

Core offer

- Fast pilot on Aadhaar, DL, and RC
- API deployment into existing tools
- Exception handling for low-confidence cases
- Expand after pilot proof

RECOMMENDED NEXT STEP

Start with a mobility onboarding pilot.

Suggested 2-week pilot scope

- Input bundle: Aadhaar, PAN, DL, RC
- Flow: parse, mask, validate, return JSON
- Integration: app flow or batch queue
- Success: turnaround, effort saved, exception rate, accuracy

Outcome

A clear before-and-after view of speed, accuracy, and reviewer effort.

What Fracto brings

- Aadhaar, PAN, DL, and RC parsers
- Masked identity handling
- Parivahan validation
- Low-lift integration

Ideal buyer personas

Head of Operations

Fleet Onboarding Lead

Risk and Compliance

Product for Driver Ops

Platform Engineering

Prepared for mobility operators evaluating onboarding and compliance automation.

NEXT STEP

Ready to automate mobility onboarding?

Start with Aadhaar, DL, RC, and PAN flows, then expand into full driver and vehicle verification.

Best fit for

- Taxi operators
- Employee transport
- EV fleets
- Managed fleet platforms
- Compliance teams

Offer

Fast pilot. Clear ROI. Low integration overhead.
