AI INFRASTRUCTURE FOR TRANSPORT DOCUMENT OPS

Automate POD and transport document review for road logistics teams.

Fracto classifies transport documents, extracts key fields, and checks whether signatures, stamps, and handwritten remarks are present.

- PODs, hire letters, trip sheets, and invoices
- Signature and stamp presence checks
- Handwritten remark detection
- APIs for ops and proof workflows

POD workflows | Trip sheet review | Hire letters | Remarks and exceptions | Transport ops desks

What this changes

POD ready

Works on proof-of-delivery and transport movement documents

Presence checks

Detect signature, stamp, and handwritten notes

Ops ready

Structured outputs plus review signals

Faster proofing

Find incomplete documents before downstream disputes

Positioning

Replace manual proof checking with one document layer for road transport operations.

THE OPERATIONAL PROBLEM

Transport document review is still manual, repetitive, and easy to miss.

PODs, hire letters, and trip sheets often need more than OCR. Teams also need proof that the right signoff is actually there.

POD

Signoff checks are manual

Teams still inspect whether a POD is signed, stamped, or annotated.

EXCEPTIONS

Handwritten notes get missed

Delivery remarks and shortages often sit in handwritten sections.

FINANCE

Trip sheets and hire docs need structure

Core fields still get keyed manually for matching and review.

SCALE

Proof queues pile up fast

Backlogs build when every document needs a human visual check.

Typical failure pattern

- PODs and trip sheets arrive in mixed quality
- Teams check stamps and signatures by eye
- Handwritten remarks are missed or delayed
- Proof completion slows billing and follow-up

What operators need instead

- Fast parsing plus visual presence checks
- Flags for missing signoff or missing stamp
- Handwritten remark detection for exceptions
- Review only the uncertain cases

CORE MODULES

Capabilities mapped to road-transport proof and ops workflows.

01

POD parser

Extract core fields from proof-of-delivery documents.

02

Hire letter parser

Structure transport hire documents for downstream ops.

03

Trip sheet parser

Extract route, trip, and movement details from trip sheets.

04

Signature detection

Check whether a required signature is present.

05

Stamp detection

Flag whether the proof carries a visible stamp.

06

Invoice parser

Pull invoice numbers, dates, and amount fields when needed downstream.

Example workflow bundle

Upload → Classify → Extract → Check signature → Check stamp → Flag remarks → Review → Approve

END-TO-END FLOW

Fracto can sit inside the transport proof and billing workflow.

01

Capture

Drivers, hubs, or ops teams upload PODs, hire letters, trip sheets, and invoices.

02

Classify

Each document is identified before the right logic runs.

03

Extract and Check

Fields are extracted and presence checks run for signatures, stamps, and remarks.

04

Route

Clean documents move ahead, while incomplete proofs go to review queues.

High-value insertion points

- POD review desks
- Billing proof checks
- Hub ops and exception handling
- Trip sheet and document matching
- Customer dispute workflows

Decision signals

- Signature present or missing
- Stamp present or missing
- Handwritten remarks detected
- Field confidence and exception flags

REFERENCE SET

Built for transport operators managing proof-heavy delivery workflows.

Relevant for line-haul, branch ops, billing proof checks, and transport exception desks.

Why this segment converts well

- Large POD and proof volumes with repetitive checks
- Incomplete PODs directly affect billing cycles
- Signatures, stamps, and notes matter operationally
- Manual proof review does not scale well

Messaging that resonates

- Know if the POD is complete before billing starts
- Detect missing signoff or missing stamp automatically
- Spot handwritten remarks without manual scanning
- Reduce proof-review effort across ops teams

BUSINESS OUTCOMES

The value case for transport operations and proof-review teams.

The gain is faster proof readiness, cleaner exception handling, and less manual visual checking.

Earlier proof readiness

PODs can be flagged as complete or incomplete faster.

Cleaner exceptions

Missing signoff and remarks get surfaced earlier.

One workflow

Classification, extraction, and visual checks in one layer.

Common workflow bottlenecks

- Proof-review queues move slowly
- Missing signatures are found late
- Stamp checks are still manual
- Remarks get lost in scanned copies

What Fracto enables

- Faster proof triage and routing
- Structured outputs into ops tools
- Manual review only for uncertain cases
- Better visibility into proof completeness

RECOMMENDED NEXT STEP

Start with a POD and transport document demo.

Suggested scope

- Input bundle: PODs, hire letters, trip sheets, and invoices
- Flow: classify, extract, detect signature, detect stamp, flag remarks
- Integration: ops desk, reviewer queue, or billing proof flow
- Success: proof completeness, exception rate, and review effort saved

Outcome

A before-and-after view of proof review speed, completeness checks, and exception handling.

What Fracto brings

- Document parsers for transport workflows
- Signature, stamp, and remark detection
- Review routing for edge cases
- Low-lift API integration

Ideal buyer personas

Operations Head | Billing Ops | Proof Review Desk | Transport Finance | Engineering

Prepared for transport operators evaluating proof and document automation.

NEXT STEP

Ready to see transport proof review in action?

Book a demo to review POD parsing, hire letter and trip sheet handling, plus signature and stamp checks on real transport files.

Best fit for

- Transport operators
- 3PL and line-haul ops
- Billing proof teams
- POD review desks
- Exception handling teams

Demo Focus

Show capabilities first. Then scope the right workflow.
