

PRODUCT MARKETING DECK

From booking confirmation to sailed, without the manual drag.

Shipments AI helps freight forwarders keep every confirmed shipment moving: Fracto reads the first pass, checks the details, follows cut-offs, updates systems, and brings a human operator in when something needs judgment.

Booking confirmation

Job creation

SI and VGM

BL review

Sailing confirmation

WHY THIS MATTERS

Freight forwarders do not lose margin on one task. They lose it across every handoff.

After a shipment is confirmed, the work fragments across customer emails, carrier portals, PDFs, spreadsheets, TMS screens, customer follow-ups, and manual checklists.

Cutoffs move faster than inboxes

SI, VGM, gate-in, documentation, and customs cutoffs are scattered across carrier confirmations and follow-up messages.

Operators re-key the same facts

Ports, parties, container details, commodity data, weights, package counts, references, and contact details are copied into multiple systems.

Exceptions are invisible until late

Missing invoices, BL mismatches, unanswered approvals, and carrier portal failures usually surface only when the shipment is already at risk.

WHAT FRACTO DELIVERS

Fracto runs the pre-sail follow-up desk for each shipment.

AI reads and checks the shipment trail first, Fracto operators handle the exceptions, and every correction improves the checks for the next shipment.

Read and audit documents

Check confirmations, invoices, packing lists, VGM, BL drafts, portal screenshots, and emails for missing or conflicting details.

Prepare and place booking

Prepare booking details from customer inputs, place bookings through agreed carrier workflows, and track confirmation.

Confirm to right parties

Once booking is confirmed, share booking number, carrier, vessel, voyage, ETD/ETA, and next steps with relevant teams.

File SI and VGM

Prepare, check, and submit SI/VGM through agreed carrier portal or email flows, with review for unclear cases.

Send reminders

Remind customers and internal teams for missing invoices, packing lists, VGM, SI details, approvals, container details, or BL approval.

Human review when needed

Fracto operators review unclear fields, missing documents, BL mismatches, customer approvals, and failed portal actions.

AI-native service model

Fracto reads first, humans review exceptions, and every booking update, SI filing, reminder, and document check keeps source proof.

CONFIRMATION TO SAIL

A complete service lane from booking confirmation to sailing.

These are the day-to-day jobs Fracto can support for an export/import operations team.

Included Fracto services

- Prepare and place bookings, maintain the shipment file, and confirm updates to relevant parties.
- Read every document, file SI/VGM, and chase missing information or approvals.
- Check carrier status, update TMS/portals where agreed, and keep source proof of what was done.

Where humans stay in the loop

- Unclear fields, missing values, or conflicting details are sent to Fracto review.
- BL mismatches, customer approval delays, and release questions are handled by an operator.
- Portal failures, carrier rejections, and urgent sailing-risk cases are escalated with evidence.
- Recurring exceptions become improved checklists, templates, and follow-up rules.

BUSINESS IMPACT

What changes for a freight forwarding branch.

More shipments per operator

Routine checking, follow-ups, status updates, and document reminders move to Fracto.

Fewer cutoff misses

Every shipment has cut-offs, risk flags, next action, and owner visibility.

Cleaner customer experience

Customers get timely document requests, approval nudges, and status visibility without inbox chaos.

Better audit and control

Branch leaders can see source documents, screenshots, customer notes, and operator decisions.

Operating metrics we track

- Shipments created and processed by carrier, client, branch, and lane.
- Cutoff adherence, document aging, approval aging, and escalation volume.
- Fracto reviews, carrier status checks, failed portal attempts, and recurring exception reasons.

What leadership gets

- A live pre-sail dashboard instead of end-of-day status chasing.
- Standard process across operators, branches, and outsourced teams.
- A practical way to reduce manual work without losing human control or source proof.

HOW TO BUY

Start with one lane. Scale to an outsourced pre-sail pod.

Pilot pod

One branch, one or two carriers, one mode, limited shipment volume, daily Fracto review, weekly performance readout.

30 days

Proof

Managed service

Dedicated Fracto coverage for confirmation-to-sail with customer follow-ups, document chase, carrier checks, exception review, and branch dashboards.

Monthly

SLA

Scaled control tower

Multiple branches, more carriers, TMS updates, standard SOPs, customer reporting, and continuous exception reduction.

Scale

Governance

Commercial model options

Per-shipment processing fee, monthly managed pod fee, or hybrid pricing with agreed service hours and volume bands. Best fit depends on branch volume, carrier mix, customer complexity, and how much system updating Fracto handles.

ROLLOUT

A practical pilot path that does not require a big-bang transformation.

1. Map the lane

Collect sample confirmations, SOPs, portal steps, TMS process, document checklist, and escalation rules.

2. Configure the service

Set fields, cut-off rules, customer email templates, carrier actions, credentials, and Fracto review queues.

3. Shadow operations

Run in parallel first: observe, assist, then take over agreed steps after the branch is comfortable.

4. Go live and scale

Move selected shipment volume to the managed pod, measure outcomes, and add carriers and branches iteratively.

Inputs needed from the forwarder

- Carrier portal access, shipping line credentials, and TMS test login where needed.
- Sample emails, documents, BL drafts, and booking confirmations.
- Approval matrix, customer contacts, document templates, and escalation rules.

Outputs from Shipments AI

- Live shipment list with status, next action, owner, and exception queue.
- Configured Fracto checks for booking, cut-offs, documents, SI, VGM, BL, and approvals.
- Weekly readout on cut-off risk, pending documents, operator reviews, recurring exceptions, and service improvements.

PILOT PROPOSAL

Let us run one pre-sail lane end to end.

Pick one branch, one export lane, two carriers, and a representative shipment volume. Fracto will support booking placement, confirmation updates, document checks, auto-reminders, SI/VGM filing, BL review support, dashboards, and weekly service reporting.

Lane selected

Carrier access

Sample documents

Ops owner

Success criteria for the pilot

- Every confirmed shipment has an owner, cut-off, next action, and latest customer/carrier status.
- Missing documents, VGM, SI details, and approvals are chased by Fracto reminders and operators.
- BL mismatches, unclear details, and portal/carrier issues are reviewed by a human.
- Branch leadership gets a weekly readout on throughput, risk, pending exceptions, and what can be improved next.
