

SALES ENABLEMENT

Where Fracto wins, and what to pitch first.

Use this guide to qualify accounts, choose the right workflow, and keep discovery calls simple.

The one-line Fracto pitch

Fracto helps companies reduce manual work when teams have to open documents or images, read details, check if they are correct, and enter them into another system.

POD
KYC
Loan packets
Steel orders
AP invoices
Claims
Returns QC

Best-fit account pattern

- 5,000+ repeated docs/images/month, or high-value delay
- Ops team manually reads, checks, or retypes fields
- Business rules decide approve, reject, or review
- Output must enter ERP, LOS, TMS, CRM, or an internal tool

Good ICP

Known workflow, clear owner, real examples available

Bad ICP

One-off docs, no owner, no downstream process

First sell

One painful workflow, not a broad AI platform pitch

Proof

Accuracy, exception rate, time saved, SLA improvement

GUIDE MAP

Read this in chapters, not as random sales notes.

The deck now moves from simple intern language to product understanding, ICP qualification, sales motion, workflow examples, and then commercial annexures.

CHAPTER 1**Start here**

Simple pitch, exact call lines, and plain-English glossary for interns.

CHAPTER 2**Product basics**

What Fracto does, what it is not, and which workflows to pitch first.

CHAPTER 3**ICP and buyers**

Personas, account tiers, qualification signals, volumes, verticals, and bad-fit patterns.

CHAPTER 4**Sales motion**

Outbound, first call, discovery, demo, pilot, ROI, and competitive positioning.

CHAPTER 5**Workflows**

Concrete workflow examples and expansion paths after the first use case works.

CHAPTER 6**Commercials**

Proof assets, security language, pricing guardrails, pricing pages, and FAQs.

Training flow: interns should learn Chapter 1 first, managers should use Chapters 2-4 for coaching, and FAQs/pricing should be used after a real workflow is qualified.

CHAPTER 1 - QUICK START

Use simple words first. Book a demo when the pain is real.

SIMPLE PITCH**Say this**

"We help teams reduce manual checking and data entry from documents, images, WhatsApp, email, and PDFs."

WHO TO CALL**Ops-heavy teams**

Ops head, finance head, onboarding manager, logistics manager, sales ops, lending ops, or founder.

GOOD SIGNAL**Repeated manual work**

They check many similar files every week and enter data into another system or spreadsheet.

YOUR GOAL**Book the demo**

Do not solve everything on first call. Confirm pain, volume, owner, and book workflow demo.

What to ask

How many docs/month?

Who checks them?

What do they check?

Where is data entered?

What gets delayed?

Who should join demo?

Avoid saying: "AI OCR platform", "100% automated", "we can do anything", or "send samples now." Say: "Let us show the workflow in a demo."

CHAPTER 1 - CALL SCRIPT

Interns can use these lines word-for-word.

Open

"We help reduce manual document checking and data entry. Is there any document flow your team still checks manually?"

Volume

"How many documents or images does your team check every month?"

Reviewer

"Who checks them today, and how much time does one file usually take?"

Checks

"What do they look for in each file: fields, signatures, stamps, IDs, line items, or missing pages?"

Output

"Where do they enter the data after checking: Excel, Google Sheet, ERP, CRM, or another tool?"

Impact

"What gets delayed when these files are not checked on time: billing, onboarding, dispatch, or approvals?"

Demo

"If Fracto can reduce this manual checking, who should join a 30-minute demo?"

Sample ask

"After the demo, we can share a short checklist for sample files needed for a pilot."

Close

"Would this week or early next week work for a workflow demo with your ops owner?"

Best intern behavior: listen for repeated manual work, write down the exact workflow, then book the right people for the demo.

CHAPTER 1 - GLOSSARY

Explain these words once, then use simpler language on calls.

OCR

Reads text from an image or PDF. It does not automatically know what the business should do next.

API

A way for two software systems to talk to each other automatically.

Webhook

Fracto sends the result automatically to another system when processing is done.

Review queue

A list of files that still need a human to check because something is unclear or missing.

Confidence

How sure the system is about an extracted answer or decision.

Master data

The company's official list, like SKU list, vendor list, customer list, or product list.

Validation

Checking whether extracted data is complete, correct, and follows the company's rules.

Exception

A case that cannot be passed automatically and needs human review.

Integration

Connecting Fracto output to tools like email, Google Sheets, ERP, CRM, or internal software.

Intern rule: if the lead is non-technical, say "send result to your system" instead of "API/webhook integration."

CHAPTER 2 - PRODUCT BASICS

Fracto is workflow automation around messy documents, not just OCR.

WHAT FRACTO IS**Ops-ready document AI**

It reads messy files, applies business checks, routes exceptions, and sends clean output to systems.

WHAT IT IS NOT**Not generic OCR**

It is not a one-off extraction tool, template-only parser, BPO team, or generic LLM prompt.

CORE BUYER PAIN**Manual review load**

Teams open files, check rules, type into systems, and chase missing or unclear cases.

SALES ANCHOR**File in, decision out**

Every pitch should map input, checks, review path, output, owner, and success metric.

1 Ingestion

Email, WhatsApp, app, API, SFTP, sheets, folders, PDFs, and images.

2 Extraction

Fields, tables, line items, handwriting, stamps, signatures, IDs, and remarks.

3 Validation

Rules, completeness, confidence, duplicate checks, masters, and verification APIs.

4 Review

Only unclear, missing, invalid, or low-confidence cases go to humans.

5 Integrations

JSON, CSV, webhook, ERP, LOS, TMS, CRM, Google Sheets, and dashboards.

6 Analytics

Volume, auto-pass, exception reasons, SLA, reviewer load, and accuracy reporting.

7 Controls

Access, audit trail, masking, retention, and customer-approved handling.

8 Expansion

Once one workflow works, add adjacent documents and checks.

Mental model for reps: OCR reads text. Document AI understands fields. Workflow automation moves decisions. Fracto combines these around the customer's operational process.

CHAPTER 2 - USE CASE MENU

Pick the use case by the operating pain, not the industry label.

PROOF WORKFLOWS**POD completeness**

Extract POD fields and check signature, stamp, handwritten remarks, and proof readiness.

POD Trip sheet GRN

Good fit: 10k+ PODs/month

FIELD IMAGES**Photo verification**

Detect valid delivery, parcel, damage, label, or return evidence from app uploads.

Damage Return Install proof

Good fit: 50k+ images/month

KYC AND ONBOARDING**Identity + vehicle docs**

Parse Aadhaar, PAN, DL, RC, mask sensitive data, and validate records.

Driver Vendor Agent

Good fit: 1k+ onboardings/month

LENDING FILES**Packet classification**

Split mixed loan files by page, route to parsers, and validate before underwriting.

KYC Banking Academics

Good fit: 1k+ applications/month

SALES OPS**Order extraction**

Turn WhatsApp or handwritten orders into SKU-matched line items.

Steel Chemicals Spare parts

Good fit: 1k+ orders/month

BILLING AND TRADE**Invoice / AWB / export docs**

Extract billing fields and check LUT, AD Code, IEC, invoice, and shipment bundles.

AP invoices AWB Packing list

Good fit: 500+ shipments/month

Simple rule

If the buyer says "we open files, read them, check something, and type into another system," there is likely a Fracto use case.

CHAPTER 3 - BUYER PERSONAS

Same product, different buyer language.

PERSONA	CARES ABOUT	PAIN	MESSAGE
COO / Ops Head	SLA, backlog, productivity	Manual review delays and escalations	"Reduce review load and clear cases faster."
Finance Head	Billing, leakage, compliance	Delayed invoices, mismatches, proof gaps	"Move clean docs to billing faster and catch exceptions earlier."
CTO / IT Head	Integration, security, maintainability	Another unsupported tool or brittle script	"API/webhook/SFTP friendly with review workflow included."
Founder / CXO	ROI, scale, risk	Growth creates ops bottlenecks	"Scale document volume without scaling review teams linearly."
Business Head	Conversion, speed, customer experience	Slow onboarding or quote turnaround	"Reduce time from file received to decision/action."
Compliance / Risk	Audit, correctness, policy	Missing docs and weak evidence trails	"Keep source, decision, confidence, and review reasons auditable."

Discovery tip: sell operational outcomes to business owners, integration path to IT, and control/audit language to risk teams.

CHAPTER 3 - ICP TIERS

Help reps decide where to spend time.

TIER 1**Prioritize now**

High volume, clear owner, direct revenue/SLA impact, samples possible after demo, system path known.

TIER 2**Develop**

Medium volume but strong compliance, delay, rework, or customer-experience pain.

TIER 3**Nurture**

Exploratory interest, unclear workflow, unclear owner, or early-stage automation thinking.

DISQUALIFY**Exit early**

One-off extraction, generic OCR shopping, no budget owner, no downstream process, no real examples ever.

Fast scoring

Volume: 0-2

Pain urgency: 0-2

Workflow clarity: 0-2

Owner access: 0-2

System path: 0-2

8-10 = Tier 1

5-7 = Tier 2

0-4 = Tier 3 / disqualify

Bad-fit examples: "I have 200 PDFs once", "Can you extract any document without setup?", "We just want cheapest OCR", "No ops owner", "No samples ever", "No downstream process."

CHAPTER 3 - QUALIFICATION

A strong Fracto prospect has volume, rules, and a painful handoff.

1

Volume is recurring

Usually 5,000+ docs/images/month, or a smaller flow with high-value delay.

2

Review is repetitive

People read the same fields, signatures, stamps, IDs, or remarks.

3

Rules are known

The team can define what is valid, invalid, or needs review.

4

Output has somewhere to go

ERP, LOS, TMS, app, ops desk, billing queue, or CSV flow.

Ask these first

- What files or images slow the team down?
- How many docs, images, pages, or cases come monthly?
- Who checks them today?
- What fields or signals are needed?
- Where should clean output go?
- What happens when a case is unclear?

Disqualify early if

- No repeated workflow
- No real examples available after demo
- No system owner or ops owner
- Buyer only wants generic OCR

CHAPTER 3 - VOLUME SIGNALS

Use these numbers to decide if the pain is big enough.

These are qualification heuristics, not hard limits. Lower volume can still work when delay, compliance risk, or revenue leakage is high.

POD / LOGISTICS**10k+ PODs / month**

Or 500+ PODs/day across branches. Good when billing waits for signature, stamp, remarks, or proof checks.

FIELD PHOTOS**50k+ images / month**

Delivery, return, damage, label, or parcel proof images that ops teams manually accept or reject.

KYC ONBOARDING**1k+ onboardings / month**

Usually 3k to 5k docs/month when each driver, vendor, or agent submits 3 to 5 documents.

LOAN PACKETS**1k+ applications / month**

Often 40 to 150 pages per file, creating 40k to 150k pages/month for classification and checks.

SALES ORDERS**1k+ orders / month**

WhatsApp, email, or handwritten orders with 3 to 20 lines each. Strong fit when SKU matching is manual.

SHIPMENT DOCS**500+ shipments / month**

Invoice, AWB, export, LUT, IEC, and AD Code checks across 500+ shipments each month.

Fast qualification question

"Roughly how many files or cases does the team touch in a month, how many pages or images per case, and how many people review them today?"

Claims

AP invoices

GRN / PO match

Returns QC

Service proof

Patient forms

CHAPTER 3 - VERTICAL CHEAT SHEET

Start with these verticals and first-use-case angles.

Road transport / 3PL

POD extraction, signature/stamp checks, trip sheets, invoices

Trigger: billing waits for proof review

Quick commerce / e-commerce

Parcel image verification, POD/AWB, invoice, export docs

Trigger: rider photos need manual checks

Mobility / fleet

Aadhaar, PAN, DL, RC parsing, Parivahan checks, onboarding queue

Trigger: onboarding is slow

Education lending

Page classification, KYC, academics, admissions, income docs

Trigger: loan packet prep is manual

Steel and suppliers

WhatsApp order extraction, product-master matching, quote rows

Trigger: sales retypes orders

Manufacturing / procurement

GRN, packing lists, supplier invoices, PO matching

Trigger: receiving compares docs manually

Insurance / claims

Claim forms, damage photos, bills, policy document checks

Trigger: claims evidence needs sorting

Healthcare / diagnostics

Prescriptions, lab reports, insurance cards, patient forms

Trigger: back office retypes details

Finance ops / AP

Invoices, receipts, tax fields, vendor master validation

Trigger: payables coding is slow

CHAPTER 3 - LISTEN FOR

The buyer will usually describe work, not "AI."

MANUAL REVIEW

"Our ops team checks every file."

RETYPING

"Data goes from WhatsApp or PDF into ERP."

LATE EXCEPTIONS

"Missing stamps or wrong files are found too late."

SLA PRESSURE

"Volume spikes create backlogs."

MATCHING WORK

"We compare invoice, PO, GRN, and vendor master."

EVIDENCE SORTING

"Claims or returns need photos, bills, and forms checked."

Translate to Fracto

- Manual checking -> extraction + validation rules
- Retyping -> structured API / CSV / ERP payload
- Late misses -> completeness and exception flags
- Document matching -> compare fields across files and masters
- Backlogs -> auto-pass clean cases, review only exceptions

Avoid this pitch

"We do AI OCR." It is too generic. Sell the workflow outcome: faster proofing, cleaner onboarding, quote-ready rows, or underwriting-ready packets.

CHAPTER 3 - BAD FIT SIGNALS

Use this playbook when you are unsure what to say next.

WHEN OPENING**Lead with workload**

"We help reduce manual document and image review in operations workflows."

WHEN QUALIFYING**Find repetition**

"How many files does the team check monthly, how many pages/images per case, and what repeats every time?"

WHEN MAPPING**Ask output**

"What exact fields or decisions should Fracto return, and where should they go?"

OBJECTION**"We already use OCR"**

"Fracto is not only OCR. We add classification, business rules, confidence, and exception routing."

OBJECTION**"Our files are messy"**

"That is exactly what the demo will show: extraction, checks, confidence, and review routing for messy cases."

CLOSE**Book the demo**

"Let us do a 30-minute workflow demo with your ops owner. Samples can come after we agree the pilot shape."

Call structure

1. Current workflow

2. File volume

3. Pages/images per case

4. Required checks

5. Output destination

6. Demo with owner

CHAPTER 4 - OUTREACH

Give junior reps short messages they can actually use.

Cold email

"Teams using WhatsApp/PDF docs often lose time in manual review. Fracto turns those files into checked, system-ready rows. Worth a 20-min workflow demo?"

LinkedIn

"Noticed your ops team likely handles high document volume. We help automate extraction, checks, and exception review. Open to a quick workflow demo?"

WhatsApp intro

"We help ops teams convert order/POD/KYC/invoice docs into clean outputs with review flags. Can I show a 10-min example?"

After demo

"Sharing the workflow summary, proposed pilot metrics, and sample checklist. Next step: confirm pilot owner and readout date."

No response

"Should I close this, or is document review still a priority for this quarter? Happy to keep it to one workflow."

Referral ask

"Who owns document review, billing proof, onboarding, or data entry ops internally? That is usually the right person."

Re-engage

"You had mentioned manual review was slowing the team. We now have a focused paid pilot path. Should we revisit one workflow?"

Finance angle

"We help move clean invoices/PODs to billing faster and catch mismatch exceptions before they delay payment."

Ops angle

"We reduce repetitive document checking so reviewers spend time only on unclear or failed cases."

Keep outbound specific: one vertical, one workflow, one pain, one demo CTA. Avoid broad "AI transformation" language.

CHAPTER 4 - FIRST CALL GOAL

First-call goal: book the workflow demo.

Do not make the first call feel like a data request. Qualify pain, confirm volume, then bring the right people to a demo.

What to confirm before demo

- One workflow and monthly volume range
- Current reviewer, owner, and downstream system
- Fields, checks, or decisions they care about
- Who should attend: ops owner + system owner

Demo objective

Show

Similar workflow and output shape

Map

Their fields and exception rules

Agree

Pilot scope and success metrics

Then

Request samples for pilot setup

Sample strategy

Ask for real samples after the demo, when the buyer understands the workflow. If they offer files earlier, accept them, but still keep the first CTA as a demo with the workflow owner.

CHAPTER 4 - DISCOVERY SCRIPT

Keep discovery practical: file in, decision out.

30-second opener

"Fracto helps teams automate document and image review. We take messy files from WhatsApp, email, apps, or PDFs, extract the needed fields, apply your checks, and return clean output to your system or review queue."

First-call CTA: book a workflow demo. Ask for samples after the demo, unless the buyer volunteers files and the workflow is already clear.

SALES	"Which document or image flow takes the most manual effort for your team today, and roughly how many cases come in monthly?"
BUYER	"Our team opens PODs / KYC docs / order screenshots and checks them manually. It is around 5,000 to 50,000 files a month."
SALES	"That volume is worth automating. What does the reviewer decide: extract fields, check completeness, validate against a master, or route exceptions?"
BUYER	"Mostly extract fields and flag missing or unclear cases."
SALES	"That is a good Fracto fit. The best next step is a 30-minute workflow demo with the ops owner and whoever owns the downstream system."
CLOSE	"Can we set up a demo this week? After that, we can share a short sample checklist for the pilot."

CHAPTER 4 - DISCOVERY DEEP DIVE

Ask deeper questions before pushing a pilot.

CATEGORY	ASK	WHY IT MATTERS
Volume	Monthly cases, pages/images per case, peak days, backlog size?	Confirms business case and subscription tier.
Process	Who reviews today, how long does it take, what tools do they use?	Finds owner, current cost, and workflow map.
Business impact	What is delayed: billing, onboarding, dispatch, underwriting, compliance?	Turns automation into revenue/SLA language.
Data	Formats, languages, file quality, exception rate, top messy cases?	Sets expectation for accuracy and review.
Decision	Who owns workflow, signs budget, approves IT/security?	Prevents demoing to a non-buyer.
Budget	Current reviewer cost, urgency, paid pilot approval path?	Checks willingness to pay and timing.

Do not ask every question mechanically. Pick the category where the deal is weakest and get enough clarity to book the workflow demo.

CHAPTER 4 - DEAL STAGES

What the next step means at every stage.

1

Qualify workflow

Identify one painful document/image flow, owner, volume, and outcome.

2

Book demo

Get ops owner plus system/IT owner into a 30-minute workflow demo.

3

Map success

Agree fields, checks, output, exception path, and measurable metrics.

4

Collect samples

After demo, request real variety: clean, messy, edge, and failed cases.

5

Paid pilot

Paid and refundable if it does not work within first 30 days.

6

Pilot readout

Show accuracy, auto-pass, exceptions, time saved, and integration path.

7

Production

Deploy subscription, credit bundle, review queue, and integration.

8

Expand

Add adjacent docs, verification APIs, more branches, and more workflows.

Never leave a call with "we will connect later." Close for a dated next step: demo, sample checklist, pilot readout, or production scoping.

CHAPTER 4 - DEMO SCRIPT

Run demos around the buyer's workflow, not features.

AGENDA**30 minutes**

Confirm workflow, show similar input-output, map checks, discuss review, close pilot path.

ATTENDEES**Right room**

Ops owner, reviewer/manager, IT/system owner, and budget/decision maker if possible.

SHOW FIRST**Before/after**

Messy input, structured output, validation flags, review queue, and system destination.

DO NOT SHOW**Avoid rabbit holes**

Do not lead with model details, generic OCR, long dashboards, or unscoped edge claims.

Questions during demo

Which fields matter?

What makes a case fail?

Who reviews exceptions?

Where should output go?

What is a good pilot result?

Who approves paid pilot?

Demo close: "If this workflow is the right one, the next step is a paid 30-day pilot with your real samples, target output, and success metrics."

CHAPTER 4 - PILOT PROOF

A pilot should prove workflow value, not just extraction.

QUALITY**Accuracy**

Field accuracy, decision accuracy, and error types by document category.

AUTOMATION**Auto-pass rate**

Percent of cases processed without human review at agreed confidence.

REVIEW**Exception rate**

Low-confidence, missing, invalid, duplicate, or master-mismatch cases.

BUSINESS**Time saved**

Turnaround time, manual minutes saved, cost per processed case, workload reduction.

Pilot checklist

100-500 real files

Clean + messy + edge cases

Output schema

Validation rules

Review owner

Integration target

30-day success criteria

Readout date

Paid pilot language: "The pilot is paid and refundable if it does not work for you within the first 30 days against agreed success criteria."

CHAPTER 4 - ROI AND ALTERNATIVES

Make cost visible during discovery.

Formula

- Monthly volume x minutes per doc = manual minutes
- Rs 25,000 / 26 / 8 = about Rs 120/hour
- Manual minutes / 60 x Rs 120 = base labor cost
- Add rework, delay, SLA penalty, leakage, and blocked revenue
- Compare against Fracto subscription + credit overage

Example: 10,000 docs x 2 min = 20,000 min = 333 hours. At Rs 120/hour, base review cost is about Rs 40,000/month before delay and rework.

COMPETITIVE POSITIONING

Position Fracto against alternatives.

ALTERNATIVE	WEAKNESS	FRACTO MESSAGE
OCR tools	Text only, weak workflow context	Extraction + validation + review + integrations.
Internal build	Slow to maintain and edge-case heavy	Faster pilot, reusable workflow modules.
RPA	Breaks on messy inputs and changing formats	Handles unstructured docs before automation.
BPO/manual	Scales cost linearly with volume	Auto-pass clean cases, review only exceptions.
Generic LLM/API	No ops controls, review, or audit path	Workflow automation around messy documents.

CHAPTER 5 - WORKFLOW EXAMPLES

Use these examples to explain what Fracto actually does.

USE CASE	WORKFLOW EXAMPLE	PITCH IN SIMPLE WORDS
POD completeness 10k+ PODs/month	POD image enters queue -> Fracto extracts POD fields -> checks signature, stamp, remarks -> complete files move to billing -> exceptions go to review.	"We help billing teams know which PODs are ready and which need manual review."
Photo verification 50k+ images/month	Rider uploads package / damage / return photo -> Fracto detects if the proof is valid -> returns valid, invalid, or review.	"We reduce manual checking of field photos and stop bad proof from moving ahead."
KYC and onboarding 1k+ onboardings/month	Driver uploads Aadhaar, PAN, DL, RC -> Fracto extracts and masks fields -> validates records -> clean cases move to approval.	"We help onboarding teams activate drivers or vendors faster with fewer manual checks."
Service proof 10k+ jobs/month	Technician uploads job card and before/after photos -> Fracto checks serial, installation proof, timestamp, and remarks -> exceptions routed.	"We help service teams prove completion without manually opening every photo."
Returns QC 25k+ returns/month	Return photo and label enter queue -> Fracto checks item, label, seal, damage, and package state -> approve, reject, or review.	"We help ops stop bad returns and reduce manual image review."

Good discovery question: "What makes a file acceptable, and what makes it go to manual review?"

CHAPTER 5 - WORKFLOW EXAMPLES

Use-case examples for lending, sales ops, and billing/trade teams.

USE CASE	WORKFLOW EXAMPLE	PITCH IN SIMPLE WORDS
Loan packet classification 1k+ applications/month	Mixed PDF enters LOS -> Fracto splits pages by type -> routes KYC, academics, income docs to parsers -> missing pages are flagged.	"We make loan files underwriting-ready before reviewers spend time on them."
Order extraction 1k+ orders/month	Buyer sends WhatsApp order image -> Fracto reads items, dimensions, pieces, weight -> matches product master -> returns quote rows.	"We turn messy customer orders into ERP-ready line items."
Invoice / AWB / export docs 500+ shipments/month	Shipment bundle arrives -> Fracto extracts invoice, AWB, IEC, LUT, AD Code fields -> validates required docs -> exceptions routed.	"We help teams catch billing and compliance gaps before shipment or reconciliation delays."
AP invoice coding 10k+ invoices/month	Supplier invoice enters AP -> Fracto extracts tax, PO, vendor, amount, and line fields -> matches vendor master and routes exceptions.	"We help finance teams reduce invoice entry and mismatch review."
GRN / PO matching 5k+ receipts/month	GRN, packing list, and PO arrive together -> Fracto compares item, quantity, rate, and supplier -> mismatch queue created.	"We help procurement and warehouse teams catch mismatches early."
Claims triage 5k+ claims/month	Claim packet arrives with forms, bills, photos, and policy docs -> Fracto classifies evidence and flags missing or unclear items.	"We help claims teams prepare files before adjusters spend time."

Good close: "Let us show the relevant workflow in a demo. After that, we will share the exact sample checklist for a pilot."

CHAPTER 5 - EXPANSION PLAYS

Once one workflow works, expand to adjacent document pain.

LOGISTICS**POD first**

POD -> billing docs -> shipment docs -> claims -> vendor onboarding.

MOBILITY**KYC first**

KYC -> fraud checks -> renewals -> RC/DL verification -> compliance audit.

SUPPLIERS**Orders first**

Orders -> quotes -> invoices -> dispatch docs -> payment reconciliation.

LENDING**Packets first**

Loan packets -> underwriting docs -> disbursement docs -> collections docs.

FINANCE**Invoices first**

Invoices -> GRN/PO match -> vendor master -> payment proof -> audit packs.

E-COMMERCE**Photos first**

Return photos -> damage proof -> AWB/POD -> seller invoices -> claims.

HEALTHCARE**Forms first**

Patient forms -> prescriptions -> lab reports -> insurance docs -> billing packets.

INSURANCE**Claims first**

Claim forms -> evidence docs -> bills -> policy match -> payout checklist.

Expansion question after pilot readout: "Which adjacent document queue has similar volume, rules, and reviewers?"

CHAPTER 6 - PROOF ASSETS

Reps need evidence, not only talk tracks.

BEFORE / AFTER**Workflow diagrams**

Show manual steps today versus Fracto ingestion, checks, review, and output.

SAMPLE OUTPUT**JSON / sheet / queue**

Show the structured fields, flags, confidence, and reasons the buyer would receive.

DEMO VIDEO**Short walkthrough**

Use when buyer needs to share internally after the call.

PILOT REPORT**Readout format**

Accuracy, auto-pass, exception reasons, time saved, and recommended rollout.

ACCURACY REPORT**Field + decision**

Separate field accuracy from business-decision accuracy and coverage.

ANONYMIZED EXAMPLES**Industry proof**

Use masked customer examples when logos or names cannot be shared.

PRICING MENU**Subscription + credits**

Use suggested pricing only after workflow and volume are understood.

EXPANSION MAP**Land and expand**

Show which adjacent workflows can follow after the first win.

Do not invent proof. If no case study is approved, use anonymized before/after samples and clearly say they are representative examples.

CHAPTER 6 - SECURITY LANGUAGE

Use careful security language and confirm details during scoping.

RETENTION**Configurable**

Discuss retention requirements during implementation; do not promise a fixed period unless approved.

ENCRYPTION**Secure transfer**

Position secure transfer and storage as implementation requirements to confirm with technical team.

ACCESS**Role based**

Limit access by role and workflow; confirm reviewer/admin needs in scoping.

AUDIT LOGS**Traceability**

Track source, extracted fields, decision, reason codes, and reviewer action where required.

PII**Mask / redact**

Support masking/redaction flows for Aadhaar, PAN, IDs, and sensitive fields where needed.

ENVIRONMENTS**Separate flows**

Keep dev, pilot, and production handling distinct when the customer requires it.

DELETION**Customer policy**

Align deletion and retention with customer policy during contracting.

TRAINING DATA**Do not overclaim**

Only state model-training policy that is approved internally for the customer context.

Safe answer: "We will confirm retention, access, deletion, and audit requirements during technical scoping and document them before production."

CHAPTER 6 - PRICING GUARDRAILS

Keep pricing consistent and avoid early commitments.

MODEL**Subscription + credits**

Monthly subscription includes page credits; API verification credits are separate add-ons.

PILOT**Paid + refundable**

Refundable if it does not work within first 30 days against agreed success criteria.

CREDIT UNIT**Page by default**

Document workflows use page credits. Verification APIs use per-verification calls.

ESCALATE**Custom pricing**

Escalate high volume, strict SLA, on-prem, complex security, or heavy custom integration.

DISCOUNTS**Do not improvise**

Discounts need approval and should be tied to volume, term, or strategic value.

DO NOT PROMISE**No 100% accuracy**

Promise measured pilot results, review routing, and agreed success metrics.

QUOTE AFTER DEMO**Scope first**

Need volume, page count, checks, APIs, SLA, and integration path before final quote.

MINIMUMS**Use current policy**

Confirm minimum pilot and production contract values internally before quoting.

Exact paid pilot wording: "The pilot is paid and refundable if it does not work for you within the first 30 days against agreed success criteria."

CHAPTER 6 - DOCUMENT PRICING

Suggested per-page prices by document type and workflow.

Use these as sales guidance. Final pricing should map to subscription credits, volume, SLA, custom rules, integrations, and verification API usage.

INVOICE EXTRACTION**Rs 3 / page**

Header fields only: vendor, GST, invoice number, date, totals, tax, due date.

INVOICE LINE ITEMS**Rs 6 / page**

Header + item rows, quantity, rate, tax, amount, and line-level validation.

KYC DOCUMENTS**Rs 3 / page**

Aadhaar, PAN, DL, RC, voter ID, passports, masking, and basic field checks.

POD / PROOF DOCS**Rs 3 / page**

POD fields, signature/stamp/remarks checks, proof completeness, review flags.

LOAN PACKET CLASSIFY**Rs 2 / page**

Page classification, document splitting, checklist mapping, and missing-page flags.

DOCUMENT CLASSIFICATION**Rs 2 / page**

Classify mixed pages or attachments into invoice, KYC, POD, bank, claim, or other doc types.

LOAN DOC EXTRACTION**Rs 3 / page**

KYC, academics, admissions, income docs, bank statements, and field extraction.

SHIPMENT DOCS**Rs 3 / page**

AWB, invoice, packing list, e-way bill, export docs, and bundle completeness.

EXPORT COMPLIANCE**Rs 4 / page**

IEC, LUT, AD Code, invoice, AWB, export checklist, and exception routing.

WHATSAPP ORDERS**Rs 5 / page**

Order image/text extraction into clean rows: item, size, quantity, weight.

MASTER MATCHING**Rs 2 / page**

SKU, vendor, customer, product, alias, or policy-master match for extracted rows.

PHOTO VERIFICATION**Rs 1 / page**

Damage, return, parcel, label, delivery, installation, or service-proof checks.

GRN / PO MATCHING**Rs 5 / page**

GRN, PO, invoice, packing list comparison with item/quantity/rate mismatch flags.

CLAIMS / EVIDENCE DOCS**Rs 3 / page**

Claim forms, bills, policy docs, evidence classification, and missing-document checks.

BANK STATEMENTS**Rs 4 / page**

Statement extraction, transaction rows, account details, and summary fields.

Recommended packaging: monthly subscription includes a page-credit bundle. Verification APIs are separate add-on credits and charged per successful verification call.

CHAPTER 6 - VERIFICATION PRICING

Suggested add-on prices for verification APIs.

These are separate from per-page document credits. Use per successful verification as the default unit unless scoped differently.

AADHAAR VERIFICATION

Rs 3 / verification

Aadhaar number/name check or approved verification flow, depending on customer setup.

PAN VERIFICATION

Rs 2 / verification

PAN validity, name match, DOB/entity details where available through approved API flow.

GST VERIFICATION

Rs 2 / verification

GSTIN status, legal name, trade name, address, taxpayer type, and active/inactive check.

DL VERIFICATION

Rs 5 / verification

Driving licence validity, holder details, class, expiry, and mismatch flags.

RC VERIFICATION

Rs 5 / verification

Vehicle registration details, owner match, fuel/type, fitness/insurance fields where available.

BANK ACCOUNT CHECK

Rs 3 / verification

Account validity and name match through penny-drop or approved bank verification route.

UDYAM / MSME

Rs 4 / verification

Udyam registration status, enterprise details, and vendor onboarding checks.

VOTER ID / PASSPORT

Rs 4 / verification

Identity-document verification where supported by the selected provider and customer consent.

FACE / SELFIE MATCH

Rs 5 / verification

Selfie-to-document face match or liveness-style check, depending on provider capability.

E-WAY BILL / E-INVOICE

Rs 3 / verification

E-way bill, IRN, invoice reference, shipment, or GST compliance check where supported.

BLACKLIST / SANCTIONS

Rs 2 / verification

Customer, vendor, driver, or entity screening against configured lists or customer masters.

BUNDLE VERIFICATION

Custom

Use custom bundle pricing when multiple APIs are called for one onboarding or shipment workflow.

Sales note: API pricing can vary by provider, consent flow, success/failure charging, and volume. Quote these as add-ons after the demo confirms which checks are actually required.

ANNEXURE - COMMERCIAL FAQ

Use these answers for pricing and pilot conversations.

How is Fracto priced?

As a **monthly subscription** with included credits. Usage beyond included credits is billed per additional credit.

What is a credit?

For document workflows, one credit usually maps to a page. Verification APIs are counted per verification call.

What inputs are needed for a quote?

Monthly cases, pages/images per case, required fields, validation rules, SLA, integrations, and expected review process.

Do we need to share samples before the demo?

No. First qualify and book the demo. Samples are best requested after the buyer agrees the workflow and pilot shape.

Is there a pilot or proof of concept?

Yes. The pilot is **paid** and refundable if it does not work for the client within the first 30 days.

How do we justify ROI?

Calculate manual effort using Rs 25,000/month as base salary. Estimate minutes per page/doc, monthly volume, and reviewer count.

What if usage crosses included credits?

The subscription includes a credit bundle. Extra usage is billed per additional credit at the agreed overage rate.

Can the plan change after volume grows?

Yes. Start with expected monthly volume, then move to a higher credit bundle when usage becomes predictable.

How should we position the paid pilot?

It protects both sides: the client gets a real test, and the fee is refundable if it does not work within 30 days.

ROI shortcut: Rs 25,000 / 26 days / 8 hours is roughly Rs 2 per working minute. If 10,000 docs take 2 minutes each, base manual cost is about Rs 40,000/month before rework and delays.

ANNEXURE - PRODUCT FAQ

Explain how Fracto fits into real operations workflows.

Can Fracto run sync and async?

Yes. Sync works for real-time API/app decisions. Async works for batches, queues, email, WhatsApp, or large PDFs.

When should we pitch sync?

Use sync when the user is waiting inside an app or portal and needs a quick accept, reject, or review response.

When should we pitch async?

Use async when files arrive in bulk and the team can process them in minutes, batches, or review queues.

What outputs can Fracto return?

Structured JSON, CSV, webhooks, dashboard queues, ERP/LOS/TMS payloads, confidence scores, and review flags.

Does it work with product masters?

Yes. It can match aliases to SKUs, vendor masters, customer masters, policy rules, or document checklists.

What about handwriting or poor image quality?

Fracto can handle messy inputs, but unclear cases should be flagged to review. Do not promise 100% automation.

Can it extract tables and line items?

Yes. Good fits include orders, invoices, packing lists, loan packets, and shipment documents with repeated rows.

Can it validate against business rules?

Yes. Rules can check required fields, ranges, master matches, document completeness, and review triggers.

Can it process images and PDFs together?

Yes. Fracto can classify mixed inputs first, then route each image, PDF, or page to the right extraction flow.

Best answer for accuracy: "We measure field accuracy, decision accuracy, and auto-pass coverage. Low-confidence cases go to review."

ANNEXURE - IMPLEMENTATION FAQ

Use these answers for security, integrations, and rollout concerns.

How does Fracto integrate?

Common paths: email, WhatsApp, Google Sheets, Excel/CSV, API, webhook, SFTP, dashboard queue, or ERP/LOS/TMS mapping.

Where does human review happen?

Clean cases can auto-pass. Low-confidence, missing, invalid, or rule-failed cases go to a review queue with reasons.

How long does rollout take?

If not highly custom, Fracto can give a testing flow in 1 to 2 days. After testing, integration is usually one sprint or 1 to 2 mandays.

Is customer data secure?

Position security as part of implementation: secure transfer, access control, retention policy, audit needs, and environment separation.

Can Fracto handle PII?

Yes, with the right workflow controls: masking, redaction, role-based access, retention limits, and customer-approved handling.

What if the process changes?

Rules, fields, product masters, and exception logic can be updated. Confirm ownership for change requests during rollout.

Who needs to join the demo?

Bring the ops owner, the person who reviews exceptions, and the system owner for ERP, LOS, TMS, or internal tools.

What if the client has no API?

Start with email, Google Sheets, CSV, dashboard, or SFTP. API/webhook can come later after value is proven.

Can rollout happen branch by branch?

Yes. Start with one workflow, branch, region, or team, then expand once rules and review flow are stable.

Safe close: "Let us map this in the demo with your ops and system owner, then we can confirm pilot scope, data handling, and integration path."

ANNEXURE - CHANNELS FAQ

Answer where files can come from and where output can go.

Can Fracto read from email?

Yes. Inbound email attachments can be processed, tagged, and routed to output or review queues.

Can Fracto work with WhatsApp orders or images?

Yes. WhatsApp images, PDFs, and order screenshots are strong fits when teams retype them manually.

Can output go to Google Sheets?

Yes. Google Sheets is a good first integration for pilots, ops review, or teams without a mature backend.

Can Fracto push to ERP or internal tools?

Yes, through API, webhook, CSV import, SFTP, or mapped payloads. Confirm the customer's system owner for the demo.

Can it work without an integration first?

Yes. Start with dashboard, spreadsheet, or CSV output. Add API/webhook after the workflow is proven.

Can Fracto read from folders or drives?

Yes, common options are shared folders, Google Drive-style flows, SFTP drops, or scheduled batch uploads.

Can it handle WhatsApp groups?

Yes, if the ingestion path is set up. For sales, position this as WhatsApp-to-structured-output workflow.

Can it read scanned PDFs?

Yes, if scan quality is reasonable. Poor scans should create review flags rather than forced clean outputs.

Can alerts go to existing tools?

Yes. Exceptions or summaries can go to email, sheets, dashboards, Slack/Teams-style channels, or internal queues.

Simple positioning: "We can start with the tool your team already uses, then integrate deeper once the workflow is proven."

ANNEXURE - OBJECTIONS FAQ

Use these when the buyer pushes back during discovery.

"We already have OCR."

Good. Fracto sits after OCR: classification, validation, master matching, confidence, and exception routing.

"Can our tech team build this?"

Maybe, but Fracto is faster when the pain is operational and the team needs extraction, rules, review, and iteration.

"Our formats keep changing."

That is normal. Sell review flags and configurable fields/rules, not a brittle fixed-template parser.

"We do not want full automation."

That is fine. Start with auto-pass for clean cases and human review for unclear or high-risk cases.

"Volume is not very high."

Check if the delay is high-value: billing blockage, onboarding loss, compliance risk, or senior-team review time.

"Accuracy must be 100%."

Do not promise that. Say clean cases can auto-pass and low-confidence cases go to review with reasons.

"This sounds expensive."

Bring it back to volume and manual cost. Compare subscription cost with reviewer time, delays, and rework.

"We need management approval."

Offer a demo with the ops owner and decision maker. Use the pilot to create proof, not a long proposal first.

"We cannot share real data."

Start with redacted samples or synthetic examples for demo. For pilot, align on secure handling and retention.

Strong response: "Fracto is not replacing every reviewer on day one. It removes repetitive checks and makes review queues smaller and cleaner."

ANNEXURE - EDGE CASES

Use these answers when the buyer asks about messy real-world files.

What if a document is duplicate?

Duplicates can be flagged using document fields, file metadata, shipment/order IDs, or similarity checks.

What if required fields are missing?

Fracto returns missing-field flags and sends the case to review instead of forcing a false clean output.

What if files are mixed together?

Fracto can classify pages or attachments first, then route each document type to the right extraction flow.

Can it handle multiple languages?

Often yes, depending on the fields and scripts. Ask for sample variety after demo to confirm coverage.

What if master data is messy?

Start with the best available master and alias list. Unknown or ambiguous matches should go to review.

Can outputs be audited?

Yes. Keep source file, extracted fields, confidence, decision, reason codes, and reviewer action where needed.

What if the wrong document is uploaded?

Fracto can classify the file and flag wrong-document cases before they enter the main workflow.

What if a PDF has 100+ pages?

Use async processing. Fracto can split, classify, and process pages, then return a structured packet summary.

What happens to low-confidence fields?

They should be returned with confidence and reason codes, then routed to review or customer correction.

Discovery prompt: "Show us the top 5 messy cases your team hates. That usually tells us the real exception rules."
