

AI INFRASTRUCTURE FOR RIDER, PARCEL, AND E-COMMERCE OPS

Automate rider onboarding with DL, PAN, parcel proof, and e-commerce document checks.

Fracto turns KYC uploads, delivery images, shipment documents, and compliance files into structured decisions for quick-commerce and e-commerce operators.

- Rider onboarding for DL, PAN, Aadhaar, and identity documents
- Parcel delivery image verification for rider app uploads
- POD, invoice, AWB, and manifest extraction
- LUT, AD Code, IEC, invoice, and export-document checks

Built for operators like Qwqer

ParcelX

Quick commerce

E-commerce logistics

Courier and export workflows

What this changes

Live proof

Valid package image or exception decision from field uploads

1 API layer

Vision checks, OCR, extraction, validation, and routing

Ops ready

JSON, confidence flags, audit trails, and review status

Export ready

Checks LUT, AD Code, IEC, invoices, and shipping files

Positioning

Replace manual image/document review with one verification layer for quick-commerce, e-commerce, and parcel workflows.

THE OPERATIONAL PROBLEM

Parcel operations still depend on manual visual checks and document-heavy exception handling.

Quick-commerce and e-commerce teams move fast, but proof verification, billing, and export compliance still get stuck in queues.

DELIVERY PROOF

Rider image uploads are inconsistent

Teams need to know if the photo is a real package proof, not a random or unusable image.

RETURNS

Damaged and wrong-item claims are hard to verify

Photos, labels, package state, and remarks need consistent checks before refund or escalation.

BILLING

Invoices and shipment documents are re-keyed

Manual extraction slows reconciliation, seller payouts, and customer billing.

COMPLIANCE

Export files need repeated checks

LUT, AD Code, IEC, invoices, and supporting documents need validation before dispatch or clearance.

Typical failure pattern

- Riders upload blurry, cropped, duplicate, or irrelevant package photos
- Ops teams manually open images to confirm package validity
- Invoice, AWB, POD, and manifest data is copied across tools
- Export-document gaps are found late in the shipment workflow

What e-commerce teams need instead

- Automated valid/invalid image decisions in the delivery flow
- Document extraction for invoices, PODs, manifests, and AWBs
- Rules and validation for LUT, AD Code, IEC, and invoice bundles
- Manual review only for low-confidence or policy-sensitive cases

CORE MODULES

Use cases mapped to quick-commerce and e-commerce operations.

01

Parcel delivery image verification

For Qwqer-style rider uploads: decide whether the image is a valid package proof.

02

POD and AWB extraction

Read delivery proof, airway bill, order ID, consignee, date, and shipment references.

03

Invoice and billing checks

Extract invoice number, GSTIN, amount, date, seller, and buyer fields for reconciliation.

04

Export-document verification

For ParcelX-style flows: check LUT, AD Code, IEC, invoice, and required shipment files.

05

Return and claim evidence checks

Classify damaged, missing, wrong-item, label, seal, and packaging evidence photos.

06

Ops-ready payloads

Return valid, invalid, review, extracted fields, confidence, and audit status to ops tools.

END-TO-END OPERATIONS FLOW

Fracto can sit inside the full parcel operations and e-commerce compliance stack.

01

Capture

Riders, sellers, hubs, or ops teams upload images and documents.

02

Inspect

Fracto classifies the file, detects package/proof validity, and extracts fields.

03

Validate

Rules check delivery proof, invoice, LUT, AD Code, IEC, and shipment requirements.

04

Decide

Ops systems receive valid, invalid, approve, review, or reject decisions.

High-value insertion points

- Delivery completion photo validation
- Dark-store dispatch and handover proof
- Return pickup and claim evidence review
- Seller invoice and shipment reconciliation
- Export compliance document checks

Integration model

- REST APIs into rider apps, seller portals, and ops tools
- Webhook callbacks for async verification states
- Dashboard access for hub, claims, and compliance teams
- Custom mapping into WMS, OMS, TMS, and billing systems

E-COMMERCE REFERENCE SET

Built for operators with parcel, delivery, billing, and compliance complexity.

Relevant for quick commerce, e-commerce logistics, courier networks, seller operations, and export shipping workflows.

Why this segment converts well

- High daily volume of delivery proofs, claims, invoices, and shipment files
- Clear need for fast valid/invalid decisions inside operational flows
- Frequent exception handling across riders, sellers, hubs, and customers
- Strong ROI from reducing manual review before billing or refunds

Messaging that resonates

- Verify delivery proof images at rider-upload speed
- Reduce fake, irrelevant, duplicate, or unusable package photos
- Unify image checks and document parsing under one API
- Keep export and billing workflows traceable

BUSINESS OUTCOMES

The value case for quick-commerce and e-commerce operations teams.

Illustrative impact for parcel proof, document extraction, and export-compliance workflows.

70 to 90%

Less manual proof and document review.

Instant triage

Valid, invalid, or review status at upload time.

1 stack

One layer for images, PODs, invoices, and export files.

Use this deck when the buyer says:

- "Our riders upload delivery photos, but ops still checks them manually."
- "We need to reject random or invalid package images automatically."
- "Invoices, AWBs, and PODs still require manual data entry."
- "LUT, AD Code, IEC, and export documents are checked too late."

Core offer

- Fast pilot on parcel image verification plus priority documents
- API deployment into rider apps, seller portals, or ops tools
- Exception handling for low-confidence and policy-sensitive cases
- Expand into billing, claims, and export compliance workflows

RECOMMENDED NEXT STEP

Start with an e-commerce operations pilot.

Suggested 2-week pilot scope

- Input bundle: package delivery images, POD/AWB, invoice, and export documents
- Qwqer-style flow: rider uploads package image, Fracto returns valid, invalid, or review
- ParcelX-style flow: extract and check LUT, AD Code, IEC, invoice, and supporting files
- Success: automation rate, false rejects, reviewer effort saved, turnaround, and audit completeness

Outcome

A clear before-and-after view of proof quality, document accuracy, compliance readiness, and reviewer effort.

What Fracto brings

- Package image validity models
- POD, AWB, manifest, and invoice extraction
- LUT, AD Code, IEC, and export-document rules
- Low-lift API, webhook, and dashboard integration

Ideal buyer personas

Head of Operations

Last-mile Ops Lead

Claims and Returns

Export Compliance

Platform Engineering

Prepared for quick-commerce, e-commerce, courier, and parcel teams evaluating proof and document automation.

NEXT STEP

Ready to automate parcel proof and e-commerce document workflows?

Start with delivery image verification, invoices, POD/AWB extraction, and export-document checks, then expand across claims, billing, and compliance.

Best fit for

Quick commerce

E-commerce logistics

Courier networks

Seller operations

Export compliance teams

Offer

Fast pilot. Clear valid/invalid decisions. Low integration overhead.
