

CLIENT IMPACT DECK

Reduce pre-sail workload without replacing your TMS.

For Indian freight forwarder owners and IT heads: Shipments AI runs the booking-to-sail desk around your current email, portals, TMS, and SOPs while your branch keeps approval authority.

Client instruction

Carrier booking

SI / VGM

BL review

Sailed proof

3,000/month base

Validation workflows across Hermes and Noble.

Less chasing

Docs, approvals, portals, and TMS updates move to a queue.

Fewer surprises

Cutoff risk and missing items surface earlier.

Better updates

Customers get structured status and requests.

Full proof

Every action keeps owner, source, and timestamp.

Human review queue

WHY NOW

Manual documentation is no longer a small back-office problem.

The industry is moving toward paperless, standardized, data-rich operations because document friction shows up as cost, delay, and weak customer visibility.

45M

ocean bills of lading issued annually

DCSA estimate for container shipping.

\$6.5B

direct cost-saving potential

DCSA on switching away from physical paper BL transfer.

40%

possible cost reduction in selected ops areas

BCG estimate for automating manual forwarding processes.

29.4%

freight forwarder eBL adoption in 2024 survey

FIT Alliance: adoption is rising, but forwarders lag other segments.

Sources: DCSA, "DCSA's member carriers commit to a fully standardised, electronic bill of lading by 2030"; BCG, "The Digital Imperative in Freight Forwarding"; FIT Alliance / FIATA 2024 eBL survey.

THE HIDDEN COST

Freight forwarders do not lose margin on one task. They lose it across every handoff.

Once a client confirms that a shipment should be booked, the work becomes a deadline-driven trail across inboxes, TMS screens, carrier portals, documents, customer approvals, and operator memory.

BCG notes that forwarding still carries an unusually high number of manual processes, including email, handoffs, and document exchange.

Client email

Booking instruction, cargo details, and last-minute changes.

Document trail

Booking request, confirmation, SI, VGM, invoice, packing list, MSDS, and gaps.

Carrier portal

Booking, SI/VGM, status, BL draft, updates, and sailing proof.

TMS / Logisys

Duplicate updates, job fields, tracker rows, and manual status fields.

WhatsApp chase

Customer reminders, branch nudges, and escalation noise.

Cutoff clock

SI, VGM, gate-in, BL approval, and release risk.

OPERATING TRANSFORMATION

From inbox-led follow-up to a controlled shipment queue.

Today: fragmented execution

- **Email and WhatsApp:** customer docs, approvals, reminders.
- **Carrier portals:** booking placement, SI/VGM, sailing status, BL drafts.
- **TMS / Excel:** duplicate updates and manual status trackers.
- **Branch memory:** who owns the next action and which cutoff is at risk.

With Shipments AI: controlled service lane

- **Live queue:** every shipment has owner, cutoff, status, and next action.
- **AI extraction:** facts, deadlines, mismatches, and missing fields with source proof.
- **Fracto desk:** carrier booking, document chase, carrier checks, and exception resolution.
- **Your control:** approvals, escalation rules, and sensitive customer decisions stay with branch leadership.

No TMS replacement

Start around your existing email, portals, documents, and operating rules; measure branch impact before expanding.

WHAT LEADERSHIP SEES

One live view of every shipment's next action and risk.

BL review	Not started	Branch

WHAT FRACTO ACTUALLY TAKES OVER

A managed booking-to-sail desk with clear approval boundaries.

Fracto moves repetitive work out of the inbox while sensitive customer, commercial, and exception decisions stay with your branch.

WORKFLOW	FRACTO OWNS	CLIENT KEEPS
Booking placement	Prepare data, submit to carrier or portal, track release, capture confirmation.	Approve unusual routing or commercial exceptions.
SI / VGM	Prepare, chase missing inputs, file where rules allow, attach proof.	Set filing rules and approve high-risk cases.
BL review	Detect mismatches, prepare comments, route unresolved issues.	Final sign-off and customer-facing risk calls.
Customer follow-up	Send structured reminders on email and WhatsApp, status updates, and document chases.	Relationship-sensitive decisions and escalations.
Portal / TMS updates	Update carrier portals and agreed TMS fields; flag portal failures and cutoff risk.	Final decision on blocked or commercially sensitive shipments.

Accountable service

Software alone creates another queue. Shipments AI combines AI, trained operators, SOPs, and weekly governance to move shipments forward.

WHY THIS IS NOT JUST SOFTWARE

The work needs a system of record, a queue, and an accountable operating team.

Shipments AI is built as an AI-native outsourcing lane: technology structures the work, Fracto operators clear the exceptions, and governance converts recurring issues into process fixes.

Shipment brain

Trusted fields, source authority, conflicts, proposed changes, and approvals stay in one record.

State gates

Each shipment state defines required fields, documents, automations, SLAs, and approval gates.

Deadline risk board

SI, VGM, gate-in, BL approval, document, customs, and customer-approval risk surface early.

Document templates

Booking requests, confirmations, SI, VGM, MSDS, invoices, packing lists, BL drafts, and more.

Carrier and TMS coverage

MSC, OOCL, HMM, CMA CGM, Maersk, Logisys, email, and WhatsApp workflows.

Operator loop

Exceptions, unclear fields, customer decisions, TMS updates, and portal failures are routed with evidence.

AI PLUS HUMAN LOOP

The model is designed for control, not blind automation.

1. INTAKE

Read the trail

Emails, docs, attachments, carrier status, and branch SOPs are captured.

2. EXTRACT

Build shipment facts

Shipment fields, cutoffs, parties, containers, and proof links are structured.

3. DECIDE

Classify next action

Clean tasks move forward; uncertain items enter Fracto review.

4. RESOLVE

Operate the desk

Fracto handles booking placement, follow-up, portal checks, reminders, and exception preparation.

5. GOVERN

Report outcomes

Branch sees risk, throughput, recurring exceptions, and improvement actions.

AI can proceed when

- Source data is clear and matches configured rules.
- The action is low-risk and already allowed by SOP.
- Proof can be attached to the shipment record.

Humans review when

- Fields conflict across documents or portals.
- BL approval, customer decision, or commercial risk is involved.
- Cutoff risk, portal failure, or carrier ambiguity appears.

VALIDATED FORWARDER WORKFLOWS

We have run document-heavy shipment workflows with Hermes and Noble.

For your branch, we can start with the same India-forwarder operating pattern: dense documentation, carrier portals, TMS updates, email, and WhatsApp follow-ups.

**3,000/month**

Validation volume across Hermes and Noble shipment workflows.

Docs covered

Booking request, confirmation, SI, VGM, MSDS, invoice, packing list.

Carriers

MSC, OOCL, HMM, CMA CGM, Maersk, Logisys, email, WhatsApp.

Workflow proof

Booking-to-sail execution across docs, portals, TMS updates, email, and WhatsApp.

Let us prove this on your shipment lane without changing your TMS, carrier portals, or customer communication flow.

CONTROL STAYS WITH YOUR TEAM

Built for sensitive freight operations where mistakes are expensive.

Source-backed actions

Every extracted field and task links back to email, document, or portal evidence.

Approval boundaries

BL sign-off, commercial decisions, customer exceptions, and risk calls stay with the client.

Configurable escalation

Rules by branch, carrier, client, lane, cutoff type, value, and exception severity.

No forced migration

Start with existing email, TMS, and carrier portal workflows before deeper integration.

Weekly governance

Risk register, open exceptions, aging, root causes, and process improvement actions.

Access control

Role-based permissions, named owners, and explicit handoff points for Fracto and branch teams.

Trust claim

Shipments AI does not ask the branch to surrender control. It gives the branch a better operating surface.

MEASURED DURING PILOT

In 30 days, we show your branch impact in operating metrics.

For a high-volume forwarding operation, we baseline your current work and show movement on workload, cutoff visibility, exception aging, and ROI.

THROUGHPUT

Shipments per operator

Baseline current volume, then compare handled volume per operator-hour.

TIME

20-35 min target

Estimated manual minutes to validate across booking, checking, chasing, updating, and confirming.

RISK

95%+ visible cutoffs

Target every SI, VGM, BL approval, gate-in, and sailing-risk deadline with owner and status.

QUALITY

Exception aging

Measure how long missing docs, mismatches, and approvals remain open.

CUSTOMER

Status response time

Track how quickly customers get accurate shipment updates and requests.

CONTROL

Proof completeness

Measure shipments with source-backed action history and final sailed proof.

Shipment volume

Example base: 3,000 shipments/month across validated workflows.

Manual work removed

Booking, checking, chasing, updating, confirming.

Cost and risk avoided

Loaded operator cost plus verified escalation and cutoff-risk costs.

ROI readout: monthly value = shipment volume x manual minutes avoided x loaded operator cost, plus verified escalation and cutoff-risk costs. Time saved and cutoff targets are estimates to validate during pilots.

30-DAY PILOT PROPOSAL

Use one branch to prove the operating model in 30 days.

Fracto will return a measured readout on workload saved, cutoff visibility, exception aging, proof completeness, TMS update quality, and scale readiness.

Hermes / Noble base

Carrier access

Sample docs

Ops + IT owner

Success criteria

- Every shipment has owner, cutoff, next action, risk, and proof.
- Docs, BL issues, TMS updates, and carrier portal actions are tracked.
- Scale recommendation is based on measured effort and coverage depth.

30-day path

Week 1

Baseline lane, documents, portals, SOPs, and current manual time.

Week 2

Shadow live shipments; configure fields, cutoffs, owners, and escalation rules.

Week 3

Take over agreed booking-to-sail steps with human review thresholds.

Week 4

Report impact, confirm operating model, and decide scale path.
